Jodi Goodall

Head of Organisational Reliability at Brady Heywood

Jodi helps decision makers in high hazard industries take a whole-of-system approach to their safety performance using a forensic mindset, data intelligence and the theory and practice of HRO - High Reliability Organisations.

HROs know that their performance is driven by the predictability of their operations. The more you know and learn about your system, the better you can anticipate, manage, and prevent major accidents, and keep on top of the drift that happens in even the most perfect of systems. This, in turn, gives you best-in-class safety performance, and enables innovation.

Jodi uses 20+ years of operational expertise in mining, heavy manufacturing, explosives, chemicals, and logistics, as well as her experience in LEAN, and her passion for fatality prevention to help organisations achieve high performance.

Jodi was the recipient of the 'Growing Healthy Organisations' Award at VIOSH, Ballarat University during her postgraduate studies in Hazard Management, and holds a Master of Science and a Bachelor of Applied Science.
